

MONARCH INSTRUMENT

Innovation in Instrumentation

L80 Pulley Alignment Tool

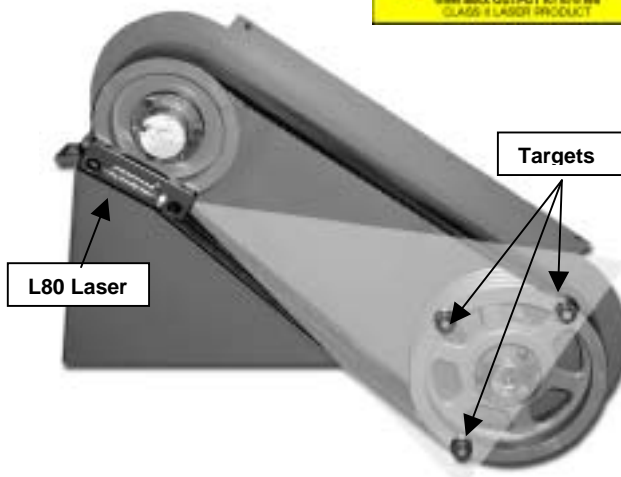

Aligns Pulleys, Belts, Sheaves, Chains, Sprockets, Conveyors, Gears and other Power Transmission Equipment. Easy to use Line Laser allows fast and accurate alignment.

Features

- Minimize excessive vibration and premature belt wear
- Visually shows pulley offset, twist and pigeon-toe
- Allows quick and precision belt alignment in less time
- Not a computer, no programming, no training
- Eliminates the guesswork of the straight-edge or string
- Also a precision Laser Level

Comes complete and ready to use

How it Works

Simply mount the laser source on the movable sheave with the adjustable magnetic attachments. Install the three magnetic targets on the stationary sheave. The visual horizontal laser beam will hit the targets. When all the targets agree the units is in alignment.
